

YOUR GUIDE TO LED

Why it works
Why you need it

Written by Bonnie Hayhoe

**SEE YOUR SKIN
IN A NEW LIGHT**

FOREWORD

Thank you for downloading my E-Book “Your Guide to LED”.

We have designed this book to help make your understanding of LED Phototherapy easier to understand and in turn help you make an informative decision about your skin.

As the owner of 2 Australian Beauty Salons, I purchased my first Dermalux LED Flex in early 2020 and as word got around about the amazing results our clients were having, I had to purchase a second one 2 months later!

I am extremely proud to offer Dermalux LED treatments in my salon as my salons are very results driven and this treatment assures our continued success with this.

About LED

What is LED?

Basically Phototherapy means "Treatment with Light". The 'Light' is specific (Blue, Red & Near Infrared) as these colours penetrates the skin at different depths and essentially energises the skin cells to function better.

This is the key to targeting concerns that occur in different parts of the skin. (See illustration below)

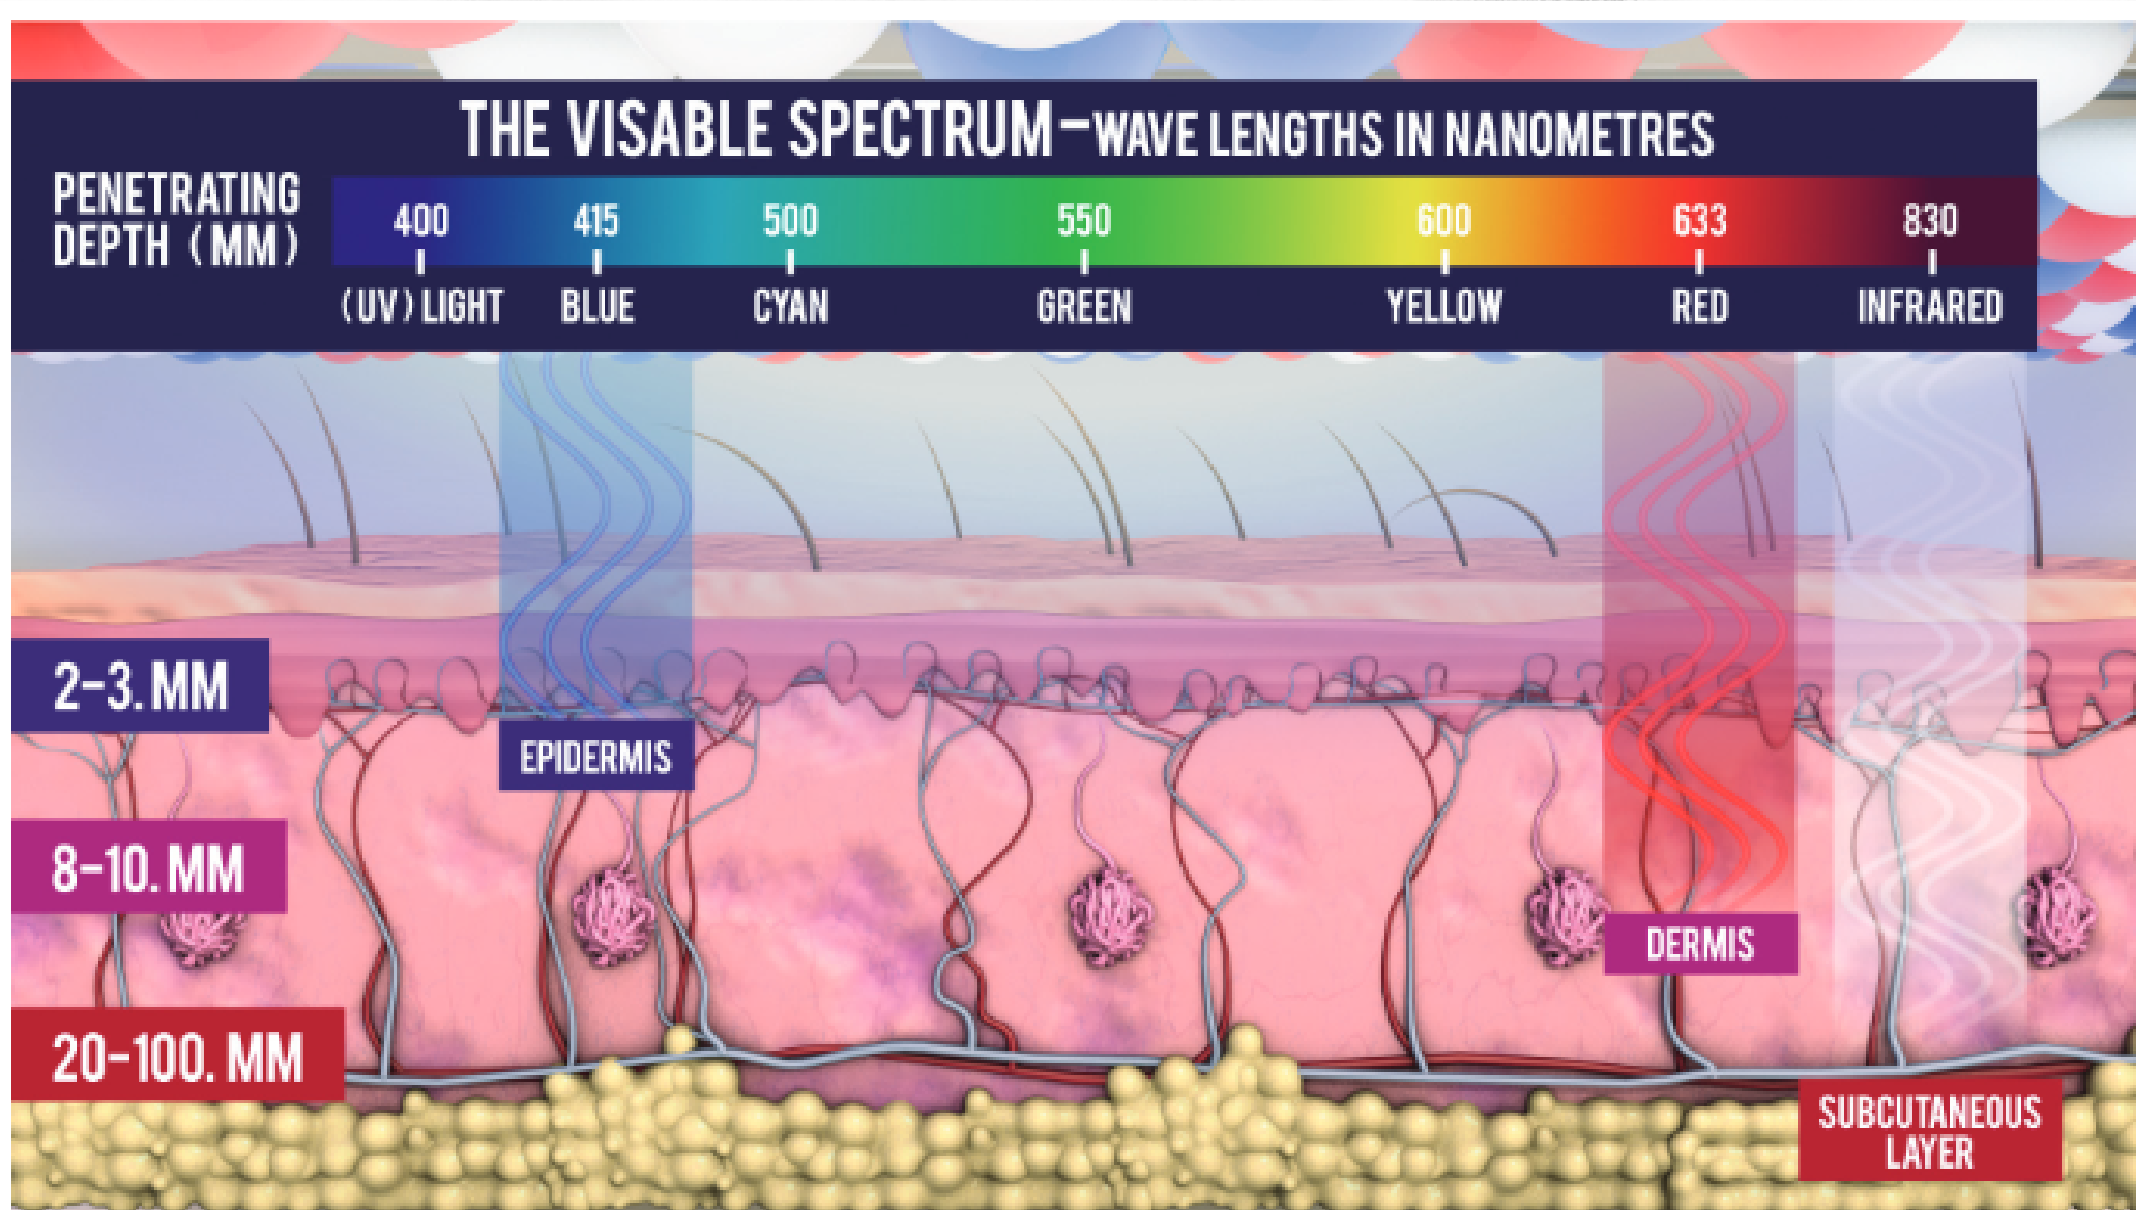

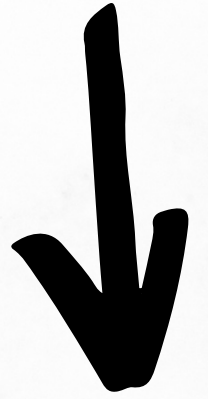

BLUE

RED

NIR

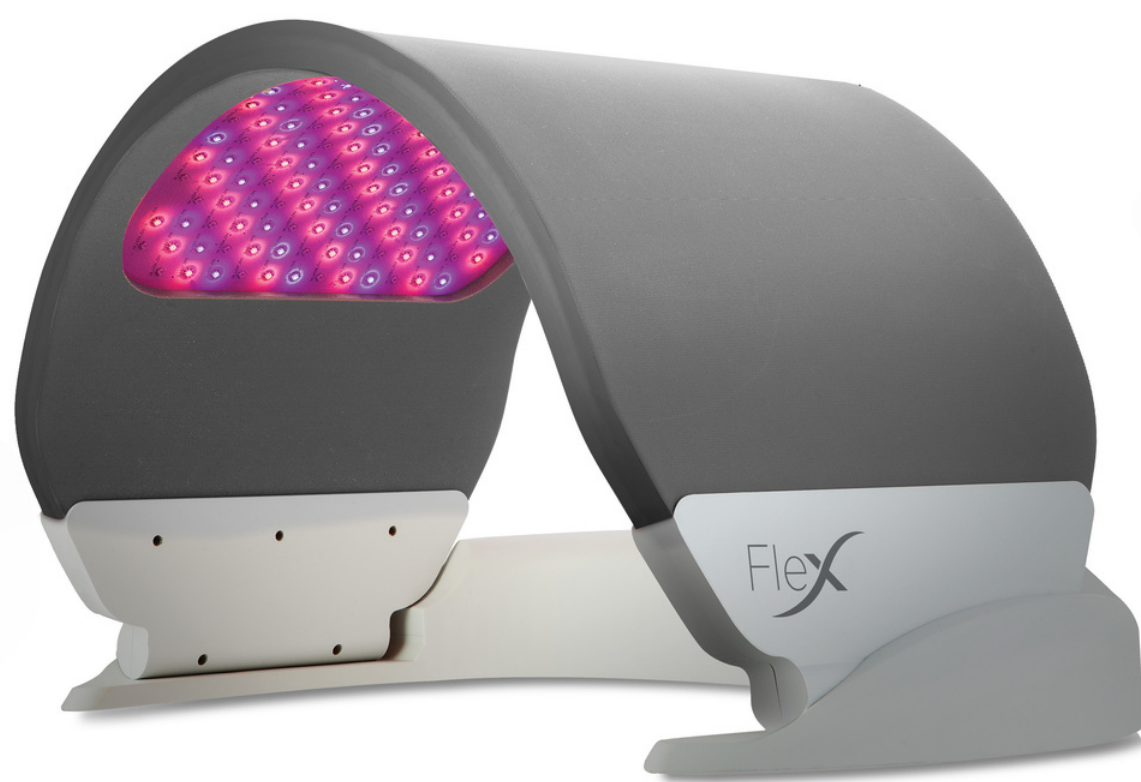

WHAT IS A DERMALUX MD LED

Why does Beauty Worx use this machine?

Dermalux has created the most powerful LED devices in the world and they are medically certified in Australia.

MD means it is medically proven to work with clinical results. Dermalux is the only LED Brand in Australia that is approved by the Therapeutic Goods Association.

The Flex option is portable with a versatile flexible design that can be used all over the body.

Dermalux®
Advanced LED Phototherapy

Flex^{MD}

Blue Light 415nm (penetration up to 1mm) KEY MECHANISM: ANTI-BACTERIAL
